

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings of claims in the application:

Claim 1 (Currently Amended): A propylene ~~polymer~~ copolymer having:

- (1) a 25°C hexane soluble content (H25) of 0-80 wt%; and,
- (2) either no melting temperature (T_m) measurable by differential scanning calorimetry (DSC), or a melting temperature (T_m) satisfying, if measurable by DSC, the following relationship:

$$\Delta H \geq 3 \times (T_m - 120),$$

wherein ΔH is a melting endotherm (J/g).

Claim 2 (Canceled).

Claim 3 (Currently Amended): The A propylene homopolymer according to claim 31, satisfying:

- (1) a mesopentad fraction (mmmm) of 30-60 mol%;
- (2) a racemic pentad fraction (rrrr) satisfying the following relationship:

$$\{rrrr/(1-mmmm)\} \leq 0.1$$

$$\{rrrr/(1-mmmm)\} \leq 0.1$$

- (3) a fraction (W25) eluted at a temperatures up to 25°C by temperature-programmed chromatography, of from 20-100 wt%; and,
- (4) a pentad fraction (rmmr) of more than 2.5 mol%.

Claim 4 (Original): The propylene homopolymer according to claim 3, satisfying the following relationship:

$$(mm) \times (rr)/(mr)^2 \leq 2.0$$

wherein (mm) is a meso triad fraction; (rr) is a racemic triad fraction; and (mr) is a triad fraction.

Claim 5 (Currently Amended): The propylene homopolymer according to claim 3, having a molecular weight distribution (Mw/Mn) of 4 or less as measured by gel permeation chromatography (GPC) and/or an intrinsic viscosity $[\eta]$ (η) of from 0.5-15.0 dl/g as measured at 135°C in tetralin.

Claim 6 (Currently Amended): ~~A~~ The propylene copolymer according to claim 1, satisfying:

- (1) a stereoregularity index (P) of 55-90 mol% as determined by ^{13}C -NMR measurement; and
- (2) a fraction (W25) eluted at a temperatures up to 25°C by temperature-programmed chromatography, of from 20-100 wt%.

Claim 7 (Currently Amended): The propylene copolymer according to claim 6 having a molecular weight distribution (Mw/Mn) of 4 or less as measured by gel permeation chromatography (GPC) and/or an intrinsic viscosity $[\eta]$ (η) of from 0.5-15.0 dl/g as measured at 135°C in tetralin.

Claim 8 (Currently Amended): The propylene homopolymer according to claim 3 produced by polymerizing propylene in the presence of a polymerization catalyst containing:

- (A) a transition metal compound represented by the general formula (I):

wherein M is a metal element of Groups 3 to 10 of the Period Table or lanthanoid series;

E^1 and E^2 are respectively a ligand selected from the group consisting of substituted cyclopentadienyl, indenyl, substituted indenyl, heterocyclopentadienyl, substituted heterocyclopentadienyl, amide, phosphide, a hydrocarbon group and a silicon-containing group, which form a cross-linked structure via A^1 and A^2 and may be the same or different;

X is a ligand capable of forming a σ -bond ~~π -bond~~ or π -bond with the proviso that when a plurality of X groups are present, these groups may be the same or different, and may be cross-linked with the other X group, E^1 , E^2 or Y;

Y is a Lewis base with the proviso that when a plurality of Y groups are present, these groups may be same or different, and may be cross-linked with the other Y group, E^1 , E^2 or X;

A^1 and A^2 are divalent cross-linking groups capable of bonding the two ligands E^1 and E^2 to each other, are respectively a C_1 - C_{20} hydrocarbon group, a C_1 - C_{20} halogen-containing hydrocarbon group, a silicon-containing group, a germanium-containing group, a tin-containing group, -O-, -CO-, -S-, -SO₂-, -Se-, -NR¹-, -PR¹-, -P(O)R¹-, -BR¹- or -AlR¹- wherein R¹ is a hydrogen atom, a halogen atom, a C_1 - C_{20} hydrocarbon group or a C_1 - C_{20} halogen-containing hydrocarbon group, and may be the same or different;

q is an integer of 1 to 5 given by the formula:

$\{(\text{valence of M}) - 2\} \{(\text{valence of M}) - 2\}$; and

r is an integer of 0 to 3, and

(B) a component selected from the group consisting of (B-1) a compound capable of forming an ionic complex by reacting with the transition metal compound (A) or a derivative thereof, (B-2) aluminoxane, and (B-3) a Lewis acid.

Claim 9 (Original): The propylene homopolymer according to claim 8, wherein the transition metal compound represented by the general formula (I) is a transition metal compound represented by the general formula (II):

wherein, M, X, Y, A¹, A², q and r are the same as defined in the above general formula (I); R² through R⁷ are respectively a hydrogen atom, a halogen atom, a C₁-C₂₀ hydrocarbon group, a C₁-C₂₀ halogen-containing hydrocarbon group, a silicon-containing group or a heteroatom-containing group with the proviso that at least one of R² through R⁷ is not a hydrogen atom; and R² through R⁷ may be the same or different, and adjacent groups of R² through R⁷ may be bonded to each other to form a ring.

Claim 10 (Original): The propylene homopolymer according to claim 8, wherein the transition metal compound represented by the general formula (I) is a transition metal compound represented by the general formula (II):

wherein, M, X, Y, A¹, A², q and r are the same as defined in the above general formula (I); R² through R⁷ are respectively a hydrogen atom, a halogen atom, a C₁-C₂₀ hydrocarbon group, a C₁-C₂₀ halogen-containing hydrocarbon group, a silicon-containing group or a heteroatom-containing group with the proviso that at least one of R² through R⁷ is a group containing a heteroatom such as oxygen, halogen or silicon; and R² through R⁷ may be the same or different, and adjacent groups of R² through R⁷ may be bonded to each other to form a ring.

Claim 11 (Original): The propylene homopolymer according to claim 9, wherein the transition metal compound represented by the general formula (II) is a transition metal compound represented by the general formula (III):

wherein, M, X, Y, A¹, A², q and r are the same as defined in the above general formula (I); at least one of R⁸ and R⁹ represents a group containing a heteroatom such as oxygen, halogen or silicon; and R¹⁰ through R¹⁷ are respectively a hydrogen atom, a C₁-C₂₀ hydrocarbon group, or a group containing a heteroatom such as oxygen, halogen and silicon.

Claim 12 (Currently Amended): The propylene copolymer according to claim 6 produced by copolymerizing propylene with ethylene and/or a C₄-C₂₀ α-olefin in the presence of a polymerization catalyst comprising:

(A) a transition metal compound represented by the general formula (I):

wherein M is a metal element of Groups 3 to 10 of the Period Table or lanthanoid series;

E¹ and E² are respectively a ligand selected from the group consisting of substituted cyclopentadienyl, indenyl, substituted indenyl, heterocyclopentadienyl, substituted heterocyclopentadienyl, amide, phosphide, a hydrocarbon group and a

silicon-containing group, which form a cross-linked structure via A¹ and A² and may be the same or different;

X is a ligand capable of forming a σ -bond ~~π -bond~~ or π -bond with the proviso that when a plurality of X groups are present, these groups may be the same or different, and may be cross-linked with the other X group, E¹, E² or Y;

Y is a Lewis base with the proviso that when a plurality of Y groups are present, these groups may be same or different, and may be cross-linked with the other Y group, E¹, E² or X;

A¹ and A² are divalent cross-linking groups capable of bonding the two ligands E¹ and E² to each other, are independently a C₁-C₂₀ hydrocarbon group, a C₁-C₂₀ halogen-containing hydrocarbon group, a silicon-containing group, a germanium-containing group, a tin-containing group, -O-, -CO-, -S-, -SO₂-, -Se-, -NR¹-, -PR¹-, -P(O)R¹-, -BR¹- or -AlR¹- wherein R¹ is a hydrogen atom, a halogen atom, a C₁-C₂₀ hydrocarbon group or a C₁-C₂₀ halogen-containing hydrocarbon group, and may be the same or different;

q is an integer of 1 to 5 given by the formula:

~~{(valence of M) - 2}~~ {(valence of M) - 2}; and

r is an integer of 0 to 3, and

(B) a component selected from the group consisting of (B-1) a compound capable of forming an ionic complex by reacting with the transition metal compound (A) or a derivative thereof, (B-2) aluminosiloxane, and (B-3) a Lewis acid.

Claim 13 (Original): The propylene copolymer according to claim 12, wherein the transition metal compound represented by the general formula (I) is a transition metal compound represented by the general formula (II):

wherein, M, X, Y, A¹, A², q and r are the same as defined in the above general formula (I); R² through R⁷ are respectively a hydrogen atom, a halogen atom, a C₁-C₂₀ hydrocarbon group, a C₁-C₂₀ halogen-containing hydrocarbon group, a silicon-containing group or a heteroatom-containing group with the proviso that at least one of R₂ through R₇ is not a hydrogen atom; and R₂ through R₇ may be the same or different, and adjacent groups of R₂ through R₇ may be bonded to each other to form a ring.

Claim 14 (Original): The propylene copolymer according to claim 12, wherein the transition metal compound represented by the general formula (I) is a transition metal compound represented by the general formula (II):

wherein, M, X, Y, A¹, A², q and r are the same as defined in the above general formula (I); R² through R⁷ are respectively a hydrogen atom, a halogen atom, a C₁-C₂₀ hydrocarbon group, a C₁-C₂₀ halogen-containing hydrocarbon group, a silicon-containing group or a heteroatom-containing group with the proviso that at least one of R² through R⁷ is a group containing a heteroatom such as oxygen, halogen or silicon; and R² through R⁷ may be the same or different, and adjacent groups of R² through R⁷ may be bonded to each other to form a ring.

Claim 15 (Original): The propylene copolymer according to claim 13, wherein the transition metal compound represented by the general formula (II) is a transition metal compound represented by the general formula (III):

wherein, M, X, Y, A¹, A², q and r are the same as defined in the above general formula (I); at least one of R⁸ and R⁹ represents a group containing a heteroatom such as oxygen, halogen or silicon; and R¹⁰ through R¹⁷ are respectively a hydrogen atom, a C₁-C₂₀ hydrocarbon group, or a group containing a heteroatom such as oxygen, halogen and silicon.

Claim 16 (Canceled).

Claim 17 (Original): A propylene resin composition comprising the propylene homopolymer according to claim 3 and a nucleating agent.

Claim 18 (Original): A propylene resin composition comprising the propylene copolymer according to claim 6 and a nucleating agent.

Claims 19-20 (Canceled).

Claim 21 (Original): A molded product produced by molding the propylene homopolymer according to claim 3.

Claim 22 (Original): A molded product produced by molding the propylene resin composition according to claim 17.

Claim 23 (Original): A molded product produced by molding the propylene copolymer according to claim 6.

Claim 24 (Original): A molded product produced by molding the propylene resin composition according to claim 18.

Claim 25 (Canceled).

Claim 26 (Original): A propylene resin modifier comprising the propylene homopolymer according to claim 3.

Claim 27 (Original): A propylene resin modifier comprising the propylene copolymer according to claim 6.

Claim 28 (Currently Amended): A polymerization catalyst comprising:
(A') a transition metal compound represented by the general formula (II):

wherein M is a metal element of Groups 3 to 10 of the Period Table or lanthanoid series;

E¹ and E² are respectively a ligand selected from the group consisting of substituted cyclopentadienyl, indenyl, substituted indenyl, heterocyclopentadienyl, substituted heterocyclopentadienyl, amide, phosphide, a hydrocarbon group and a silicon-containing group, which form a cross-linked structure via A¹ and A² and may be the same or different;

X is a ligand capable of forming a σ -bond or π -bond with the proviso that when a plurality of X groups are present, these groups may be the same or different, and may be cross-linked with the other X group, E¹, E² or Y;

Y is a Lewis base with the proviso that when a plurality of Y groups are present, these groups may be same or different, and may be cross-linked with the other Y group, E¹, E² or X;

A¹ and A² are divalent cross-linking groups capable of bonding the two ligands E¹ and E² to each other, are respectively a C₁-C₂₀ hydrocarbon group, a C₁-C₂₀ halogen-containing hydrocarbon group, a silicon-containing group, a germanium-containing group, a tin-containing group, -O-, -CO-, -S-, -SO₂-, -Se-, -NR¹-, -PR¹-, -P(O)R¹-, -BR¹- or -AlR¹- wherein R¹ is a hydrogen atom, a halogen atom, a C₁-C₂₀ hydrocarbon group or a C₁-C₂₀ halogen-containing hydrocarbon group, and may be the same or different;

q is an integer of 1 to 5 given by the formula:

{(valence of M) - 2}; and

r is an integer of 0 to 3, and M, X, Y, A¹, A², q and r are the same as defined in the above general formula (I); R² through R⁷ are respectively a hydrogen atom, a halogen atom, a C₁-C₂₀ hydrocarbon group, a C₁-C₂₀ halogen-containing hydrocarbon group, a silicon-containing group or a heteroatom-containing group with the proviso that at least one of R² through R⁷ is not a hydrogen atom; and R² through R⁷ may be the same or different, and adjacent groups of R² through R⁷ may be bonded to each other to form a ring, and

(B) a component selected from the group consisting of (B-1) a compound capable of forming an ionic complex by reacting with the transition metal compound (A) or a derivative thereof, (B-2) aluminoxane, and (B-3) a Lewis acid.

Claim 29 (Currently Amended): A polymerization catalyst comprising:

(A') a transition metal compound represented by the general formula (II):

wherein M is a metal element of Groups 3 to 10 of the Period Table or lanthanoid series;

E¹ and E² are respectively a ligand selected from the group consisting of substituted cyclopentadienyl, indenyl, substituted indenyl, heterocyclopentadienyl, substituted heterocyclopentadienyl, amide, phosphide, a hydrocarbon group and a silicon-containing group, which form a cross-linked structure via A¹ and A² and may be the same or different;

X is a ligand capable of forming a σ -bond or π -bond with the proviso that when a plurality of X groups are present, these groups may be the same or different, and may be cross-linked with the other X group, E¹, E² or Y;

Y is a Lewis base with the proviso that when a plurality of Y groups are present, these groups may be same or different, and may be cross-linked with the other Y group, E¹, E² or X;

A¹ and A² are divalent cross-linking groups capable of bonding the two ligands E¹ and E² to each other, are respectively a C₁-C₂₀ hydrocarbon group, a C₁-C₂₀ halogen-containing hydrocarbon group, a silicon-containing group, a germanium-containing group, a tin-containing group, -O-, -CO-, -S-, -SO₂-, -Se-, -NR¹-, -PR¹-, -P(O)R¹-, -BR¹- or -AlR¹- wherein R¹ is a hydrogen atom, a halogen atom, a C₁-C₂₀

hydrocarbon group or a C₁-C₂₀ halogen-containing hydrocarbon group, and may be the same or different;

q is an integer of 1 to 5 given by the formula:

{(valence of M) - 2}; and

r is an integer of 0 to 3, and M, X, Y, A¹, A², q and r are the same as defined in the above general formula (I); R² through R⁷ are respectively a hydrogen atom, a halogen atom, a C₁-C₂₀ hydrocarbon group, a C₁-C₂₀ halogen-containing hydrocarbon group, a silicon-containing group or a heteroatom-containing group with the proviso that at least one of R² through R⁷ is a group containing a heteroatom such as oxygen, halogen or silicon; and R² through R⁷ may be the same or different, and adjacent groups of R² through R⁷ may be bonded to each other to form a ring, and

(B) a component selected from the group consisting of (B-1) a compound capable of forming an ionic complex by reacting with the transition metal compound (A) or a derivative thereof, (B-2) aluminoxane, and (B-3) a Lewis acid.

Claim 30 (Currently Amended): A polymerization catalyst comprising:

(A'') a transition metal compound represented by the general formula (III):

wherein, M is a metal element of Groups 3 to 10 of the Period Table or lanthanoid series;

E¹ and E² are respectively a ligand selected from the group consisting of substituted cyclopentadienyl, indenyl, substituted indenyl, heterocyclopentadienyl, substituted heterocyclopentadienyl, amide, phosphide, a hydrocarbon group and a silicon-containing group, which form a cross-linked structure via A¹ and A² and may be the same or different;

X is a ligand capable of forming a σ -bond or π -bond with the proviso that when a plurality of X groups are present, these groups may be the same or different, and may be cross-linked with the other X group, E¹, E² or Y;

Y is a Lewis base with the proviso that when a plurality of Y groups are present, these groups may be same or different, and may be cross-linked with the other Y group, E¹, E² or X;

A¹ and A² are divalent cross-linking groups capable of bonding the two ligands E¹ and E² to each other, are respectively a C₁-C₂₀ hydrocarbon group, a C₁-C₂₀ halogen-containing hydrocarbon group, a silicon-containing group, a germanium-containing group, a tin-containing group, -O-, -CO-, -S-, -SO₂-, -Se-, -NR¹-, -PR¹-, -P(O)R¹-, -BR¹- or -AlR¹- wherein R¹ is a hydrogen atom, a halogen atom, a C₁-C₂₀ hydrocarbon group or a C₁-C₂₀ halogen-containing hydrocarbon group, and may be the same or different;

q is an integer of 1 to 5 given by the formula:

{(valence of M) - 2}; and

r is an integer of 0 to 3, and M, X, Y, A¹, A², q and r are the same as defined in the above general formula (I); at least one of R⁸ and R⁹ represents a group containing a heteroatom such as oxygen, halogen or silicon; and R¹⁰ through R¹⁷ are respectively

a hydrogen atom, a C₁-C₂₀ hydrocarbon group, or a group containing a heteroatom such as oxygen, halogen and silicon, and

(B) a component selected from the group consisting of (B-1) a compound capable of forming an ionic complex by reacting with the transition metal compound (A) or a derivative thereof, (B-2) aluminosiloxane, and (B-3) a Lewis acid.

Claim 31 (New): A propylene homopolymer having:

- (1) a 25°C hexane soluble content (H25) of 0-80 wt%;
- (2) neither a melting temperature (T_m) nor a melting endotherm (ΔH) measurable by differential scanning calorimetry (DSC).

BASIS FOR THE AMENDMENT

Claims 2, 16, 19, 20 and 25 have been canceled.

Claims 8, 12 and 28-30 have been amended as supported at page 19, line 2 from the bottom.

New Claim 31 has been added as supported at page 14, lines 4-21 and by Claim 1 as originally filed. "No melting temperature T_m measurable by DSC means that a melting endotherm ΔH is not observed as supported at page 14, lines 9-21, by Example 1-3 in Table 2-1, and by Example 13-16 in Table 5-1.

No new matter is believed to have been added by entry of this amendment. Entry and favorable reconsideration are respectfully requested.

Upon entry of this amendment Claims 1, 3-15, 17-18, 21-24 and 26-31 will now be active in this application.
